

LINEAR 153

Frameless Glass Sliding Door System

LINEAR 153

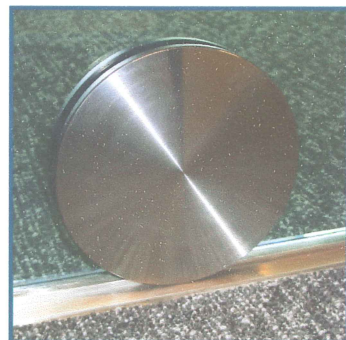

- 250kg CAPACITY PER DOOR
- SUITS 10mm & 12mm GLASS
- 153mm DIAMETER SSS ROLLERS
- NATURAL ALUMINIUM HEAD GUIDE WITH BRUSH FELT
- BLACK ACETAL STOPS MOUNTED IN HEAD GUIDE

Is possibly the most interesting sliding door gear available today. Designed for frameless Glass panels up to 250kgs in weight. The bottom rollers are fitted directly through the glass meaning no bottom rails are required to house in rollers. This in turn makes for a very appealing look.

The Stainless Steel Wheels have a Black Acetal tyre so the operation on the Stainless Steel Track is both smooth and silent.

Because all the weight is loading on the floor, the transom does not have to be constructed to carry the full weight of the door as is the case for top hung doors.

This system lends itself for use in domestic or office situations as a room divider and can be used in cavity sliding applications.
